DETAILED ACTION

1. Claims 29, 34-36, 38, and 41-47 were pending in the instant application at the time of the issuance of the previous Office Action, mailed September 11, 2007. By the latest response from the Applicant, filed February 4, 2008, claims 29 and 38 are additionally cancelled. Therefore claims 34-36 and 41-47 remain pending and have been examined.

Priority

2. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 08/883,337, filed on June 26, 1997.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

IN THE CLAIMS

Claim 47 is amended as follows:

47. A disk manufacturing method comprising:

producing a session key;

enciphering data with the session key to obtain first information;

supplying the session key to a key control organization;

~~received~~ receiving from said key control organization, second information obtained by
enciphering the supplied session key with itself;

receiving from said key control organization, third information composed of a plurality of
enciphered session keys obtained by enciphering the supplied session key with a
plurality of master keys, respectively, and

recording the first information, the second information, and the third information onto a
recording medium.

Allowable Subject Matter

4. Claims 34-36 and 41-47 are allowed.
5. The following is an examiner's statement of reasons for allowance:

The closest prior art in the field, Haas US 5,719,938, and Smith 6,823, 070, do not teach the features found in the independent claims of:

As per claims 34, and 35: recording at least a part of a number P of second keys, where P is an integer greater than or equal to two, in a secret area in a deciphering device; inputting first enciphered data obtained by enciphering data with a first key and second information composed of a P number of enciphered first keys obtained by enciphering the first key with the P number of second keys, respectively; and then deciphering at least one of the P number of enciphered first keys using the recorded P number of second keys to obtain said first key; and confirming that the obtained first key is correct; and then deciphering the enciphered data using the obtained first key after the confirmation step.

As for claim 36: a key control method wherein a first caretaker takes custody of a plurality of second keys; a second caretaker takes custody of first information composed of enciphered data obtained by enciphering data with a first key and second information

composed of a P number of enciphered first keys, where P is an integer greater than or equal to two, obtained by enciphering said first key with a P number of second keys of said plurality of second keys, respectively, and a third caretaker that takes custody of at least part of said plurality of second keys, said at least part of said plurality of second keys being recorded in a secret area of a device provided by the third caretaker.

As for claim 41: storing a plurality of master keys, allocating at least part of the plurality of master keys to a player maker; receiving a session key supplied from a disk maker; selecting part of the plurality of master keys for use in enciphering the session key in a case where part of the plurality of master keys has been broken; enciphering the received session key with a selected part of the plurality of master keys to produce a plurality of enciphered session keys, and supplying the produced plurality of enciphered session keys to said disk maker.

As for claim 42: storing a plurality of second keys, enciphering data with a first key; enciphering said first key with a P number of the second keys where P is an integer greater than or equal to two, thereby obtaining a P number of enciphered first keys, and then enciphering said first key with the first key itself.

As for claim 43, a key control method applied to a key control organization, a disk maker, and a player maker. The claims may be distinguished from the prior art since it does not teach the features found in the claims of a player device or a disk provided a

manufacturer with one or more master keys and a third information obtained by enciphering a session key with itself.

As for claims 46 and 47, the prior art does not teach the features of receiving from a key control organization a third information composed of a plurality of session keys obtained by enciphering a supplied session key with a plurality of master keys and recording the first, second, and third information into a recording medium.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
